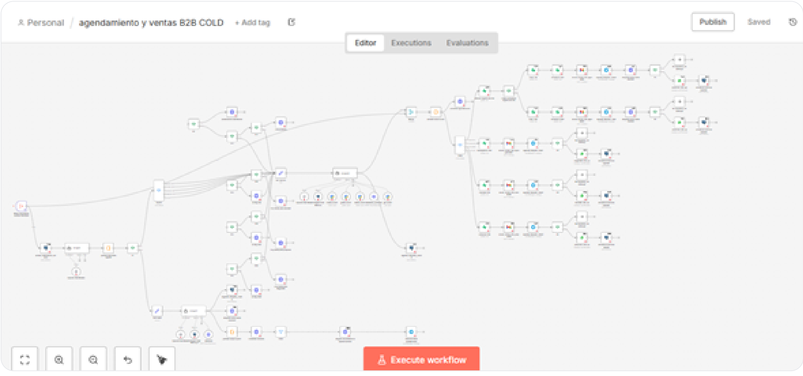
Selected n8n Projects

Cold B2B WhatsApp Sales Agent

Objective: Automated cold B2B prospecting and demo scheduling via WhatsApp.

End-to-end sales automation pipeline that scrapes and enriches company data using Google Antigravity (Playwright MCP), stores structured data in Supabase, and generates fully personalized cold WhatsApp outreach messages.

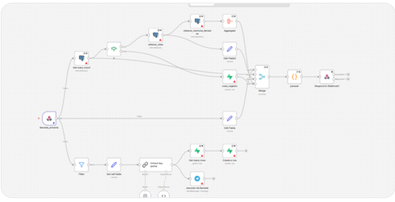
Once a prospect replies, specialized AI agents handle qualification, persuasion and calendar scheduling, adapting behavior based on funnel stage.



View GitHub

Real-Time Feedback for Voice Agents (Retell AI)

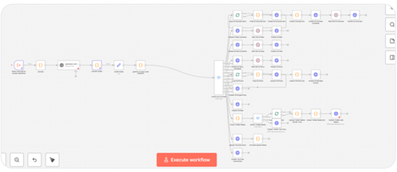
Real-time enrichment system for inbound AI voice calls. n8n injects customer context from Supabase and enables live calendar operations.



View GitHub

AI Video & Image Generator (SORA 2 + KIE AI)

Automated AI content generation pipeline for videos and images. Generates prompts, scenes and scripts, stores assets in Google Drive, indexes them in Supabase and distributes results via Telegram.



View GitHub

WhatsApp Complaint Resolution Agent (Meta FLOWS)

Automated complaint intake and resolution system using WhatsApp Cloud API and Meta FLOWS. Structured complaint data is stored and resolved using AI agents with vector search over company knowledge bases.
